Background

Today we will run through a complete RNAseq analysis

The data for for hands-on session comes from GEO entry: GSE37704, which is associated with the following publication:

Trapnell C, Hendrickson DG, Sauvageau M, Goff L et al. "Differential analysis of gene regulation at transcript resolution with RNA-seq". Nat Biotechnol 2013 Jan;31(1):46-53. PMID: 23222703

The authors report on differential analysis of lung fibroblasts in response to loss of the developmental transcription factor HOXA1. Their results and others indicate that HOXA1 is required for lung fibroblast and HeLa cell cycle progression.

Data Import

```
counts <- read.csv("/Users/wadeingersoll/Desktop/BGGN213/class13/GSE37704_featurecounts.csv"
metadata <- read.csv("/Users/wadeingersoll/Desktop/BGGN213/class13/GSE37704_metadata.csv")
```

Check correspondence of `metadata` and `counts` (i.e. that the columns in `counts` match the rows in the `metadata`).

```
metadata
```

```
         id     condition
1 SRR493366 control_sirna

ENSG00000187634       258
```

```
colnames(counts)
```

```
[1] "length"    "SRR493366" "SRR493367" "SRR493368" "SRR493369" "SRR493370"
[7] "SRR493371"
```

```
metadata$id
```

```
[1] "SRR493366" "SRR493367" "SRR493368" "SRR493369" "SRR493370" "SRR493371"
```

Fix to remove that first "length" column of `counts`

```
counts <- counts[,-1]
```

Also let's remove low count genes

```
tot.counts <- rowSums(counts)
head(tot.counts)
```

```
ENSG00000186092 ENSG00000279928 ENSG00000279457 ENSG00000278566 ENSG00000273547 
              0               0             183               0               0 
ENSG00000187634 
           1129 
```

Let's remove all zero count genes

```
zero.inds <- tot.counts == 0
head(zero.inds)
```

```
ENSG00000186092 ENSG00000279928 ENSG00000279457 ENSG00000278566 ENSG00000273547 
           TRUE            TRUE           FALSE            TRUE            TRUE 
ENSG00000187634 
          FALSE 
```

```
counts <- counts[!zero.inds,]
```

```
all(c(T, T, F))
```

```
[1] FALSE
```

```
test_cols <- !all(colnames(counts) == metadata$id)
```

```r
if( test_cols ) {
  message("Wow... there is a problem with the metadata counts setup")
}
```

Setup for DESeq

```r
library(DESeq2)
```

```

```

Visualize results

```r
library(ggplot2)

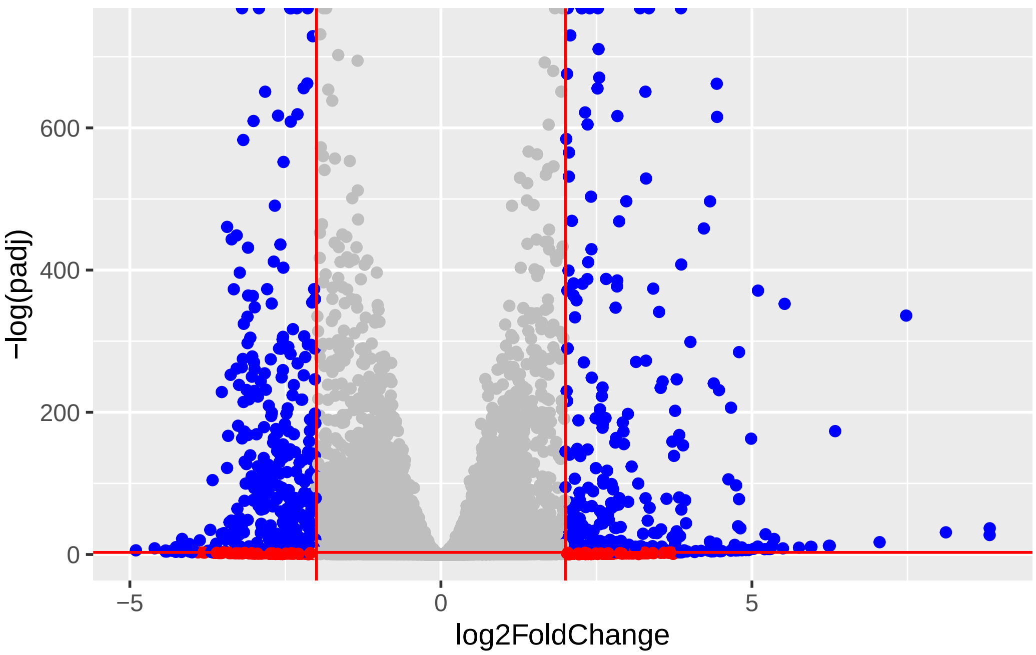
# Make a color vector for all genes
mycols <- rep("gray", nrow(res) )

# Color red the genes with absolute fold change above 2
mycols[ abs(res$log2FoldChange) > 2 ] <- "red"
```

```r
# Color blue those with adjusted p-value less than 0.01
#  and absolute fold change more than 2
inds <- (res$padj < .05) & (abs(res$log2FoldChange) > 2 )
mycols[ inds ] <- "blue"

ggplot(res) + aes(log2FoldChange, -log(padj)) +
  geom_point(col=mycols) +
  geom_vline(xintercept = c(-2,2), col='red') +
  geom_hline(yintercept = -log(0.05), col='red')
```

```
Warning: Removed 1237 rows containing missing values or values outside the scale range
(`geom_point()`).
```



Pathway analysis

```r
library(gage)
library(gageData)

data(kegg.sets.hs)
data(sigmet.idx.hs)
```

For **gage** we want a named vector of importance

GO Analysis

Let's try GO Analysis and compare to KEGG analysis

```r
data(go.sets.hs)
data(go.subs.hs)

# # Focus on Biological Process subset of GO
# gobpsets = go.sets.hs[go.subs.hs$BP]
#
# gobpres = gage(foldchanges, gsets=gobpsets, same.dir=TRUE)
#
# lapply(gobpres, head)
```

Reactome

Some folks really like Reactome online (i.e. their webpage viewer) rather than the R package of the same name (available from bioconductor).

To use the viewer we want to upload our set of gene symbols for the genes we want to focus on (here those with a P-value below 0.05)

```r
sig_genes <- res[res$padj <= 0.05 & !is.na(res$padj), "symbol"]
print(paste("Total number of significant genes:", length(sig_genes)))
```

```
[1] "Total number of significant genes: 8147"
```

```r
head(sig_genes)
```

```
ENSG00000187634 ENSG00000188976 ENSG00000187961 ENSG00000188290 ENSG00000187608 
       "SAMD11"         "NOC2L"        "KLHL17"          "HES4"         "ISG15" 
ENSG00000188157 
         "AGRN" 
```

Save results

```
#save(res, file="my_results.RData")
```
